

FOOT DROP

how they should be assessed and managed

Q&A

Introduction

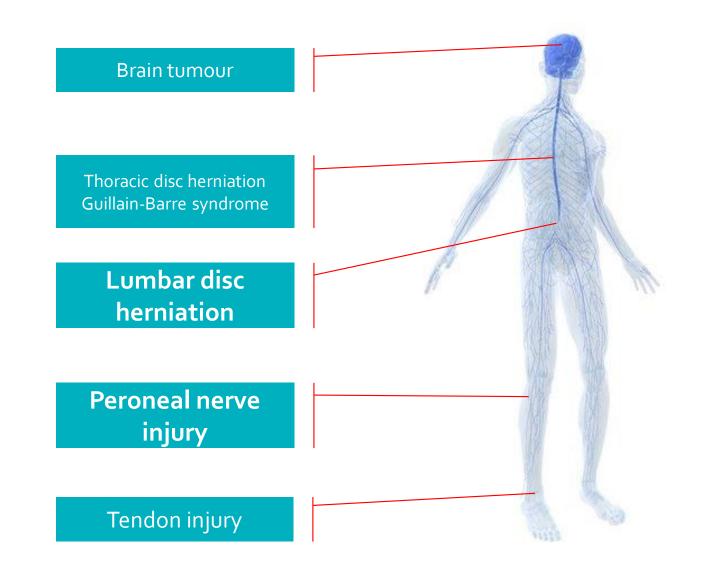

- Causes
- Diagnosis
- Management

Structural causes

Unilateral foot drop

Systemic causes

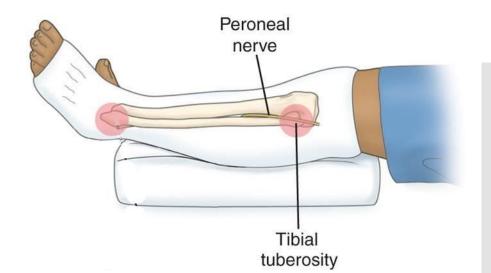

Bilateral foot drop

- Neuropathies
- Myopathies
- Endocrine

Diagnosis

- Dragging foot
- Tripping over toes
- Sciatic pain?
- Pressure on peroneal nerve?

Gait

Examination

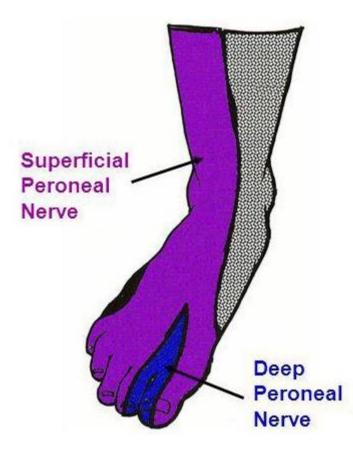

- Pattern of weakness
- Check for upper motor neurone signs
 - Brain
 - Spinal cord

Numbness

Superficial and Deep Peroneal Nerves provide sensory innervation to dorsum of Foot

Very similar to L5 dermatome Not possible to differentiate But confirms a 'nerve issue'

NCS EMG need to wait 6 weeks

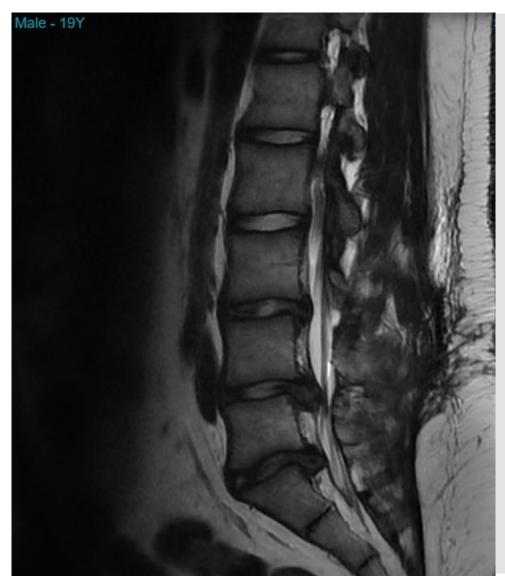

More investigation

- If lumbar MRI clear
- No obvious injury to peroneal nerve
- Any upper motor neurone signs
- Think of brain and spinal cord MRIs

Management

- Any spinal cause, urgent spine referral
- Surgical decompression could help
 - Discectomy
 - Laminectomy

Management

- If spine surgery won't help
- Expectant
- Splint AFO
- Tendon transfer??

Q & A

Thank you A recording of the webinar will be available online

Further resources for GPs are available on my website <u>https://spinalsurgeonsydney.com.au/for-referrers</u>
